## SPARE PARTS LIST

Note: In order to locate the relevant spare part, please check the corresponding parts and part mumber in the drawing. Minimum order quantity will be required.

[^0]
## FAUCET INSTALLATION

## STEP 1 - PREPARATION FOR MOUNTING THE FAUCET

## FAUCET INSTALLATION

## STEP 3 - CONNECTING THE WATER SUPPLY

Connect the flexible pipe to the water supply.
For models with temperature control connect the red flexible pipe to the hot water supply and the blue flexible pipe to the cold water supply.
Make sure the filter (s) is installed between the flexible hose (s) and the shut off valve (angle valve - not supplied).

Turn on the central water supply and the shut-off valves (angle valves) and check for leaks.

## STEP 4 - CONNECTING THE POWER SOURCE

If your model is Swan $1010 \backslash$ Swan 1000: your product contains an internally mounted 9 V battery. To activate it, proceed to clause \# 2.

If your model is Swan 1010 B \}
Swan $\mathbf{1 0 0 0}$ B: install the battery
box underneath the sink with the cable connection pointing down and connect the connectors.

If your model is Swan $1010 \mathrm{E} \backslash$ Swan
1000 E: Plug the transformer into the electricity socket and connect the connectors.

## FAUCET INSTALLATION

## TROUBLESHOOTING

| PROBLEM | INDICATOR | CAUSE | SOLUTION |
| :---: | :---: | :---: | :---: |
| No water coming out of the faucet: | 1. Sensor flashes continuously when user's hands are within the sensor's range. | Low battery. | Replace battery |
|  | 2. LED in the sensor does not flash once when user's hands are within the sensor's range. | 1. Range is too short. | Increase the range |
|  |  | 2. Range is too long. | Decrease the range |
|  |  | 3. Battery is completely used up | The battery must be replaced. |
|  |  | 4. Unit is in "Security Mode"* |  |
|  |  | 5. Sensor is picking up reflections from the washbasin or another object. | Eliminate cause of reflection. |
|  | 3. LED in the sensor flashes once when user's hands are within the sensor's range. | 1. Connectors between the electronic unit and solenoid are disconnected. | Connect the electronic unit connectors to the solenoid. |
|  |  | 2. Debris or scale in solenoid. | Unscrew solenoid, pull out the plunger and the spring from the solenoid and clean them. Use scale remover material if needed. When replacing the plunger, please make sure that the spring is in vertical position. |
|  |  | 3. The central orifice in the diaphragm is plugged or the diaphragm is torn | Clean the orifice or replace diaphragm. |
|  |  | 4. The water supply pressure is higher than 8 bar. | Reduce the supply water pressure. |
|  |  | 5. The water supply pressure is under 8 bars and yet the pressure in the faucet's body is higher. This situation could be caused by a sudden increase in the water supply pressure that the back check prevents from dropping, even after water supply pressure drops under 8 bars. | Shut off water supply and unscrew one of the flexible pipes in order to reduce the pressure that blocks the product. |
| Water flow from spout does not stop: | 1. Sensor flashes once when user's hands are within the sensor's range. | Debris or scale in diaphragm | Clean the orifice or replace diaphragm. |
|  | 2. LED in the sensor does not flash once when user's hands are within the sensor's range. | 1. Sensor is dirty or covered.** <br> 2. Sensor is picking up reflections from the washbasin or another object. | Clean or eliminate case of interference. <br> Decrease the range or eliminate cause of reflection. |
| Water flow diminished |  | Filter or aerator is clogged | Remove, clean, re-install |

* "Security Mode": If the sensor is covered for more than 90 sec . the faucet will automatically shut off water flow. To return to normal operation remove any blockage.
** In this case, the water flow will stop anyway after 90 seconds because of the security time.

## BATTERY REPLACEMENT

SWAN 1010 AB 1953/ SWAN 1000 AB 1953

When the battery weakens, the LED indicator light will blink at a constant rate. The battery must be replaced within two weeks.

To replace the battery at Swan $1010 \backslash$ Swan 1000 models:

3 (3)Release the Allen screw to carefully remove the faucet's body.
Disconnect the connector from the electronic unit's connector.

(2)If your model is Swan 1000: Release the handle-set-screw to remove the mixing handle. Release the Allen screw to carefully remove the axis assembly by pulling it out.
 assembly by puling it out.

Carefully push the sensor into the
4 faucet's body to gain access to the battery and pull it out of the body together with the battery.
Replace the used battery with a new 9 V battery. A lithium battery is recommended.

## BATTERY REPLACEMENT

SWAN 1010 AB 1953/ SWAN 1000 AB 1953

5Prior to reassembling the electronic unit and the battery, make sure that the o-ring is still in its groove and not damaged. Replace it with a new one if needed. Clean and lubricate it with silicone grease.
Important: Make sure that the faucet is not wet when reassembling the electronic unit.

6
Carefully place the battery inside the body and reassemble the electronic unit in its place. Be sure to insert the electronic unit all the way back into the opening in the faucet's body by pushing it moderately into the o-ring.
Swing the sensor gently to align it with its location. Be careful and make sure that you do not tear the o-ring. If torn replace it with a new one.
